Akamai	Input Validation		**Notes**			
Akamai	Input Validation		Customers are charged a monthly flat fee based on the amount of traffic pushed on their core delivery product. The flat fee is calculated based on the underlying core product's average traffic for the last 3 months. The fee varies depending on what tier the amount of traffic falls into. Akamai	ODMS		**EDGECOMPUTING**			
Akamai	ODMS		Akamai EdgeComputing is an "On Demand" computing service that enables			
Akamai	ODMS		enterprises to execute sophisticated application logic on Akamai edge servers,			
Akamai	ODMS		thus reducing the number of requests and amount of infrastructure in an			
Akamai	ODMS		organization's application tier. Akamai supports three types of EdgeComputing:			
Akamai	ODMS					
Akamai	ODMS		**(1) EdgeComputing powered by WebSphere** is a deployment model for			
Akamai	ODMS		IBM WebSphere applications onto Akamai's network.			
Akamai	ODMS					
Akamai	ODMS		**(2) EdgeComputing powered by Tomcat** is a deployment model for			
Akamai	ODMS		standard Servlet and JSP applications using the Tomcat Servers on Akamai's			
Akamai	ODMS		network.			
Akamai	ODMS					
Akamai	ODMS		**(3) EdgeComputing ESI** (Edge Side Includes) provides customers with			
Akamai	ODMS		access to execution of sophisticated logic on Akamai's network.			
Akamai	ODMS					
Akamai	ODMS					
Akamai	ODMS		All types of EdgeComputing are priced using a pay per use utility computing			
Akamai	ODMS		model. It is important to note that EdgeComputing ***requires*** the customer			
Akamai	ODMS		to have DSA/DSD, or WAA.			
Akamai	ODMS					
Akamai	ODMS		The EdgeComputing contract pricing model is flexible to accommodate usage			
Akamai	ODMS		based on the number of end user requests. A ***"Request"*** is defined as the			
Akamai	ODMS		HTTP get or post of a JSP, Servlet, ESI script, or XSLT style sheet. Pricing is			
Akamai	ODMS		based upon a threshold of 250 CPU milliseconds per request and a cumulative			
Akamai	ODMS		application server memory usage threshold of 75MB as measured by Akamai.			
Akamai	ODMS		Akamai reserves the right to remove applications from the Akamai network			
Akamai	ODMS		or charge additional fees if Customer's usage exceeds either threshold as			
Akamai	ODMS		measured by Akamai.			
Akamai	ODMS					
Akamai	ODMS		**Committed Usage Rate Pricing**			
Akamai	ODMS		Akamai EdgeComputing is priced according to the monthly Committed Usage			
Akamai	ODMS		Usage Rate (CUR) of the Akamai platform. When a customer exceeds their			
Akamai	ODMS		CUR the rate per MM of requests will remain constant rather than lowering to			
Akamai	ODMS		the rate in the next range. For example, if a customer has a CUR of 20 MM			
Akamai	ODMS		requests they will pay $ 875 per million requests. If for one month they use 26			
Akamai	ODMS		MM requests they will be charged $ 875 per million requests on all of the			
Akamai	ODMS		requests, and they will not be able to take advantage of the lower rate of			
Akamai	ODMS		$ 825 associated with a CUR of 25 MM requests.			
Akamai	ODMS					
Akamai	ODMS		**EdgeComputing Professional Services**			
Akamai	ODMS		Each EdgeComputing application requires a Professional Services engagement			
Akamai	ODMS		for implementation. If the customer is not using an EdgeComputing application			
Akamai	ODMS		package (see below) Professional Services will require an application scoping			
Akamai	ODMS		For implementation. If the customer is not using an EdgeComputing application			
Akamai	ODMS					
Akamai	ODMS		**Ongoing Application Support**			
Akamai	ODMS		Post-implementation, ongoing support is provided via EdgeComputing			
Akamai	ODMS		application support. Application support ***is required*** for every EdgeComputing			
Akamai	ODMS		implementation. EdgeComputing application support provides the following:

Akamai	DSA		**The Dynamic Site Accelerator Service includes the following:**			
Akamai	DSA					
Akamai	DSA		**SureRoute for Performance**: Chooses the most effective route			
Akamai	DSA		between edge and origin servers for optimum delivery performance.

Akamai	DSA		performance of those connections.			
Akamai	DSA					
Akamai	DSA		**Compression:** Compressing content before it is sent to the end-user			
Akamai	DSA		especially effective at reducing transfer times for HTML content to

Akamai	DSA		**Basic Content Availability**: DSA provides controls that increase the			
Akamai	DSA		availability of content when the origin is unresponsive or Internet			
Akamai	DSA		issues block connectivity to the origin server. Serve content from			
Akamai	DSA		cache when origin is unresponsive. The DSA server will serve the			
Akamai	DSA		requested content from cache even if its TTL has expired if the origin			
Akamai	DSA		server is unresponsive.			
Akamai	DSA					
Akamai	DSA		**SureRoute for Failover**: If the path between a DSA server and the			
Akamai	DSA		the origin is blocked, SureRoute for Failover can select a path that			
Akamai	DSA		routes around the blockage so that the origin can always be reached.			
Akamai	DSA					
Akamai	DSA		**Basic Site Security**: In addition to Akamai's rigorous security that			
Akamai	DSA		protects website infrastructure from attacks, DSD provides			
Akamai	DSA		additional site security features.			
Akamai	DSA					
Akamai	DSA		**Capacity On-Demand**: This feature provides customers ensured			
Akamai	DSA		capacity as needed. Akamai's network intelligence detects when			
Akamai	DSA		traffic is increasing and automatically load balances traffic among			
Akamai	DSA		servers and datacenters that are best suited to service each user.			
Akamai	DSA					
Akamai	DSA		**Dynamic Mapping**: Each end user request is dynamically mapped to			
Akamai	DSA		an Akamai edge server via Akamai's intelligent DNS.			
Akamai	DSA

Akamai	DSD					
Akamai	DSD		**Dynamic Site Delivery** provides a subset of features and			
Akamai	DSD		modules available with Dynamic Site Accelerator. This solution is			
Akamai	DSD		targeted at prospects that don't value dynamic content acceleration			
Akamai	DSD		and don't require advance feature module capability. ***DSD does***			
Akamai	DSD		***not include:***			
Akamai	DSD					
Akamai	DSD		• Acceleration Features: SureRoute, TCP Optimization & Prefetching.			
Akamai	DSD					
Akamai	DSD		• Site and Visitor Intelligence reports, although these reports can be			
Akamai	DSD		purchased as a module – see below.			
Akamai	DSD					
Akamai	DSD		Furthermore, DSD has only a standard SLA:			
Akamai	DSD		• Serve content faster than origin.			
Akamai	DSD		• 100% availability.			
Akamai	DSD					
Akamai	DSD					
Akamai	DSD		**Dynamic Site Delivery provides customers with the following**			
Akamai	DSD		**capabilities and benefits:**			
Akamai	DSD					
Akamai	DSD		**Capacity On-Demand:** Provides customers with ensured			
Akamai	DSD		capacity as needed. Akamai's network intelligence detects			
Akamai	DSD		when traffic is increasing and automatically load balances traffic			
Akamai	DSD		among servers & datacenters that are best suited to service each			
Akamai	DSD		user.			
Akamai	DSD					
Akamai	DSD		**Compression**: Compressing content prior to sending it to end users			
Akamai	DSD		is effective at reducing transfer times for HTML content to control and authentication functionality out to the Edge rather than			
Akamai	DSD		users on slower connections; because application pages are often light on graphics, this technique can be particularly effective for			
Akamai	DSD		light on graphics, this technique can be particularly effective for			
Akamai	DSD		improving performance of transactional content.			
Akamai	DSD					
Akamai	DSD		**Basic Cache Optimization:** DSD provides a wide range of			
Akamai	DSD		cache control features that maximize the cacheability of content			
Akamai	DSD		including setting TTL, modifying headers, path modification, and			
Akamai	DSD		downstream caching. (**Note:** This does not include the "Advanced			
Akamai	DSD		Cache Optimization" module features --- see below for details).			
Akamai	DSD					
Akamai	DSD		**Basic Content Availability:** DSD provides controls that increase			
Akamai	DSD		the availability of content when the origin is unresponsive or Internet			
Akamai	DSD		issues block connectivity to the origin server. The DSD server will			
Akamai	DSD		serve the requested content from cache even if its TTL has expired			
Akamai	DSD		if the origin server is unresponsive.			
Akamai	DSD					
Akamai	DSD		**SureRoute for Failover:** If the path between a DSD server and

Akamai	DSD		routes around the blockage so that the origin can always be reached.			
Akamai	DSD					
Akamai	DSD		**Basic Site Security:** In addition to Akamai's rigorous security that			
Akamai	DSD		protects website infrastructure from attacks, DSD provides additional			
Akamai	DSD		site security features.			
Akamai	DSD					
Akamai	DSD		**Dynamic Mapping:** Each end user request is dynamically mapped to

Akamai	DSD		feature module component, and a Site component.

Akamai	DSD		**Billing Models for the DSD Solutions**			
Akamai	DSD		**Note:** The standard billing model for Dynamic Site Solutions is million			
Akamai	DSD		page views (MPV). For this purpose, Akamai defines a page view as			
Akamai	DSD		the delivery of a file by Akamai that has Content Type "text/html" but			
Akamai	DSD		excludes redirects (HTTP response code 301/302) and File Not Found

Akamai	DSD		**included per MPB committed or usage, whichever is higher. If the**			
Akamai	DSD		**customer exceeds this limit, a per GB charge is applied.**			
Akamai	DSD

Akamai	DSD		**"95/5 Mbps"** and **"GB Delivered"** billing models are available under			
Akamai	DSD		certain circumstances --- as may be required by some customers.			
Akamai	DSD		Akamai will review & approve these requests, as appropriate.			
Akamai	DSD					
Akamai	DSD		DSD is also available with pricing based on monthly Committed Volume

Akamai	DSD		a set of URLs, defined by at most one domain name and five hostnames,			
Akamai	DSD		used to deliver content for a discrete and individual application program.
