PageFreezer is a leading provider of website and social media archiving solutions to a wide range of industries including finance, legal, telecom, retail, utilities, government and post-secondary education. PageFreezer is a SaaS (Software-as-a-Service) application that enables organizations and corporations of all sizes to permanently preserve their website and social media content in evidentiary quality and then access those archives and replay them as if they were still live. Uses for the archived data range from compliance with regulators such as the SEC, FINRA and the FDA to litigation preparedness, evidence capture, call center support and competitive intelligence.

Based in Vancouver, British Columbia, PageFreezer Technologies is a privately-held firm that is owned and managed by a successful team of software veterans. The company was founded in 2006 and has been operating in Europe and North America since 2010. With a rapidly expanding customer base and the most comprehensive website and social media archiving solutions available, PageFreezer is the premier provider of archiving services for online content to companies throughout the world.

**Automatic Archiving** PageFreezer uses crawling technology, similar to that of Google, to take snapshots of your website. Archiving is an automated process, saving you time. Only new webpages and changes to webpages are archived, saving storage space.

**Public Records Compliance** Government websites, in accordance with the Public Records Law, are considered an official government publication. Information on these sites influences decisions of citizens and businesses. Governments can be held accountable for the information they publish on the web. Tracking changes on the websites with PageFreezer offer governments trusted, non-refutable evidence in case of liability claims.

**FINRA, SOX and SEC Compliant** In archiving their electronic data, financial companies need to comply with the records management regulations of the Financial Industry Regulatory Authority (FINRA), while public companies need to comply with the records management regulations of the Sarbanes-Oxley (SOX) Act and SEC. PageFreezer is FINRA, SOX and SEC compliant.

**Live Replay/Browsing of Archives** Log into your PageFreezer dashboard to view a list of all archived websites. Click on an archive to open the website as if it is still live to view how the site looked on a specified date.

**Search** Powerful search functions allow you to quickly find archived pages. Narrow your search by

**Legal Evidence** Digital archives are worthless in case of legal claims unless evidence of data integrity and authenticity is provided. PageFreezer secures this by placing a digital signature and timestamp on each page.

**Digital Signatures** A SHA-256 strong digital signature is placed on each page providing evidence of data integrity and authenticity. This signature proves the archived webpages have not been altered over time. This technology adheres to the guidelines described in the FRCP (Federal Rules of Civil Procedure) and the FRE (Federal Rules of Evidence) in the USA and the Canadian Evidence Act in Canada.

**Timestamps** Each page is time stamped with an ANSI X9.95 compliant Time Stamp Authority securely synchronized with the certified atomic clocks of a Stratum-1 Time Server. This trusted, non-refutable time that cannot be altered without detection provides evidence of the time the page was archived.

**Data Export** Your data is yours and remains yours. When dealing with a legal claim that requires a physical copy of your files, or when you need a local copy for any other reason, then you can request a data export in XML format of all your archived websites.

**World-Class Data Centers** PageFreezer employs world-class data centers to store and protect your data over the long term. Unlike typical RAID configurations which can only store data for 3-5 years, our servers are configured for long-term storage of 20+ years thereby enabling us to meet any record retention schedule that is deployed.
