(SAM) DATABASE:** Active, CAGE Code: 7TW36
Dark Horse Technologies
Proposed Labor Categories

**Commercial Job Title:** Program Manager

**Minimum Experience:** 7 years

**Minimum Education:** Master's in computer science, Information Systems, Engineering, Business or other related disciplines

**Functional Responsibility:** Uses in-depth knowledge to manage the scope, human resources, risk, cost, and time of the technical project. Organizes, plans, and directs all contractor support activities for assigned task orders. Formulates and reviews task order performance plans, technical and contractual performance, and deliverable items, determines task order(s) cost, and ensure conformance with all prescribed standards, schedules, and statements of work contained in all issued task orders. Manages the day-to-day activities of assigned projects and is directly responsible for supervision of the personnel assigned to task orders under his/her purview. Responsible for the development and maintenance of project performance/status reports including cost elements. Uses own judgment and initiative in providing technical direction to ensure performance and for resolving problems. Interface with customer project personnel on a continuous basis. This is an unclassified position.

**Commercial Job Title:** Senior Technical Expert

**Minimum Experience:** 20 years

**Minimum Education:** Master's in Computer Science, Finance, Accounting, Business or other technical studies.

**Functional Responsibility:** Provide expertise and guidance to security, telecommunications or IT projects in subject matter area of specialized knowledge. Expertise may be called out in product selection, enterprise architecture, system design, engineering, intelligence systems, security and other technical, operational, and analytical disciplines to include reliability, maintainability and life cycle cost management that is necessary for task execution and completion. Experienced in the operational environment and using high-level functional systems analysis, design, integration, documentation, and implementation methodologies on problems requiring knowledge of the
subject matter for effective implementation. Participates as needed in all phases of engineering
design and software development with emphasis on the planning, analysis, testing, integration,
documentation, and presentation phases. Designs and prepares technical reports, databases,
Studies, and related documentation; make charts and graphs to record results. Prepare and
deliver presentations and briefings as required by the order. Extensive knowledge of security
requirements for specialized information transfer applications and skills in preparing technical
reports and providing other services. May provide expert-level analytical and technical guidance
to projects involving training, tactical/operational documentation, IT support, telecommunication
systems, security systems design, or other efforts requiring operations expertise in a converged
environment. Is specialized in an area of leadership. Has the opportunity to be a classified or an
unclassified position.

Commercial Job Title: Senior Software Engineer

Minimum Experience: 6 years

Minimum Education: Bachelor’s in computer science

Functional Responsibility: Analyze technical business applications and design specifications.
Develop block diagrams and logic flow charts. Translate detailed design into computer software.
Test, debug, and refine the computer software to produce the required product. Assist in resolving
basic operating problems. Prepare required documentation, including program-level and system-
level documentation. Prepare instructions for computer operators. Enhance software to reduce
operating time or improve efficiency. Provide software conversion and implementation support.
May provide technical direction and supervision to more junior programmers. This is an
unclassified position.

Commercial Job Title: Software Engineer I

Minimum Experience: 4 years

Minimum Education: Bachelor’s in computer science

Functional Responsibility: Analyze technical business applications and design specifications.
Develops block diagrams and logic flow charts. Translates detailed design into computer
software. Test, debug, and refine the computer software to produce the required product. Assist
in resolving basic operating problems. Prepare required documentation, including program-level
and system-level documentation. Prepare instructions for computer operators. Enhance software
to reduce operating time or improve efficiency. Provide software conversion and implementation
support. May provide technical direction to more junior programmers. This is an unclassified
position.

Commercial Job Title: Systems Integrator I

Minimum Experience: 3 years

Minimum Education: Bachelor’s Degree in Computer Science, Information Systems, or Engineering, or
other related discipline or 10 years of related technical experience may be substituted for education
**Functional Responsibility:** Uses in depth knowledge to operate and tune customer systems, servers and other system integration related components to ensure high levels of availability and security of the core organizational applications. This individual participates in the planning and implementation of system monitoring, maintenance and support of all networked software and operating systems. When applicable, the individual will also provide end-user support and troubleshooting of applications and software. Has the ability to learn and utilize unfamiliar COTS products for integration and testing purposes. Conducts necessary project planning to ensure organized delivery of products. Maintains accurate configuration management records. Communicate both verbally and in written format: research discoveries, recommendations, requirements, trends, issues, and concerns as related to system integration, stability, and growth. Prepare any documentation deliverables as requested by the customer. Document all code written during the contract period.

**Commercial Job Title:** Systems Integrator II

**Minimum Experience:** 5 years

**Minimum Education:** Bachelor’s Degree in Computer Science, Information Systems, or Engineering, or other related discipline or 10 years of related technical experience may be substituted for education

**Functional Responsibility:** Uses in depth knowledge to operate and tune customer systems, servers and other system integration related components to ensure high levels of availability and security of the core organizational applications. This individual participates in the planning and implementation of system monitoring, maintenance and support of all networked software and operating systems. When applicable, the individual will also provide end-user support and troubleshooting of applications and software. Has the ability to learn and utilize unfamiliar COTS products for integration and testing purposes. Conducts necessary project planning to ensure organized delivery of products. Works with analytical and investigative tools to enable development of knowledge engineering systems that include link, pattern and temporal analysis functions. Maintains accurate configuration management records. Communicate both verbally and in written format: research discoveries, recommendations, requirements, trends, issues, and concerns as related to system integration, stability, and growth. At request of customer, attend management level meetings and present findings, status and other requested information. Prepare any documentation deliverables as requested by the customer. Document all code written during the contract period.

**Commercial Job Title:** Information Assurance Engineer I

**Minimum Experience:** 3 years

**Minimum Education:** Bachelor's Degree in Computer Science or Information Systems Security

**Functional Responsibility:** Uses in depth knowledge focusing on securing and protecting systems by installing and operating firewalls, cross domain solutions, or using systems that detect intrusions or prevent them. Develops and implements plans to safeguard the most significant data stored in various computer systems by developing and designing a system and installing it for security purposes. Performs daily routine activities, administration and management of systems to maintain complete integrity, confidentiality and availability of technological infrastructures. Provide recommendations related to technical security by interacting with team members, management and customers. Communicate risk factors and identify the requirements to ensure security of systems. Review and comply with current procedural and accreditation policies and guidance and ensure they are being followed. Developing documentation that supports the operation of the security system, its maintenance procedures and the relevant solutions for specific problems. Write installation instructions and oversee application of changes to systems.
Collect/analyze/report any artifacts from application of changes. Provide Training and Guidance to users, perform troubleshooting activities. Maintain custom scripts as needed. Assists with developing, debugging, testing and supporting the process related to certification of systems. Responsible for mitigating and assessing risks and threats involved in the system.

**Experience & Degree Substitution Equivalencies for All Labor Categories**

*Experience exceeding the minimum shown may be substituted for education. Likewise, education exceeding the minimum shown may be substituted for experience.*
