Labor Category Descriptions

**Project Systems Architect**

**Functional Responsibilities:** The Project Systems Architect supports all phases of the Software Development Life cycle (SDLC) process that is applied to all Information Technology (IT) infrastructure projects. Support include planning, requirements analysis, engineering, design, development, testing, certification, and implementation of new and/or enhanced operational capabilities in the form of multiple, discrete projects. Other responsibilities include: system definition requirements, cost analysis creation, provision and maintenance across multiple locations, server cluster administration, system backup management, and troubleshooting and diagnosis.

**Minimum Education:** B.S. degree in IT, Computer Science, Engineering, or equivalent experience.

**Minimum Experience:** Two to three years’ experience of IT Administration; one year of experience in architectural design, development, and deployment of the enterprise’s overall systems.

**Systems Administrator**

**Functional Responsibilities:** The Systems Administrator manages system infrastructure including databases, testing computer equipment, firewalls, malware, and other Software (SW) and Hardware (HW). Provides technical support for both HW and SW issues that may arise; monitors the system daily and responds quickly to any security breaches or usability concerns; backs up systems and verifies that backups have been completed; regularly upgrade systems as needed; and assists in integrating new applications and technologies into the current system.

**Minimum Education:** B.S. degree in IT, Computer Science, or equivalent experience.

**Minimum Experience:** Two years’ experience as a System Administrator. Ability to respond to help desk requests after hours. Expert knowledge of system security concerns and vulnerabilities. In-depth knowledge and experience with VMware. Familiarity with Linux and Microsoft (MS) Windows operating systems.
**Systems Engineer**

**Functional Responsibilities:** The Systems Engineer manages and monitors all installed systems and infrastructure. Installs, configures, tests, and maintains operating systems, application software, and system management tools. Proactively ensure the highest levels of systems and infrastructure availability. Monitor and tests application performance for potential bottlenecks, identifies possible solutions, and works with developers to implement those fixes. Maintains security, backup, and redundancy strategies. Writes and maintains custom scripts to increase system efficiency and lower the human intervention time on any tasks. Participates in the design of information and Operational Support Systems (OSS). Provides 2nd and 3rd level support. Liaises with vendors and other IT personnel for problem resolution.

**Minimum Education:** B.S. degree in IT, Computer Science, Engineering, or equivalent experience.

**Minimum Experience:** This position requires two years’ proven working experience in installing, configuring, and troubleshooting Linux / Windows based environments. Solid Cloud experience, preferably in Amazon Web Services (AWS) / Office365. Experience with virtualization and containerization. Experience with monitoring systems. Solid scripting skills (e.g., shell scripts, Perl, and PowerShell). Solid networking knowledge (Open Systems Interconnection (OSI) network layers, and Transmission Control Protocol (TCP) / Internet Protocol (IP)).

**Technical Project Lead I**

**Functional Responsibilities:** The Technical Project Lead I is responsible for adding technical expertise to the project which is of moderate risk and complexity and /or part of a larger program. Ensures that required resources such as manpower, systems, HW and applications, computer time, facilities, and the likes are available. Develops and maintains a technology project plan, which outlines a project’s tasks, milestone dates, status, and allocation of resources to stakeholders and other interested parties. Clearly defines and quantifies each step, as well as establishes concrete deadlines for each project milestone and deliverable.

**Minimum Education:** B.S. degree in IT, Computer Science, or equivalent experience.

**Minimum Experience:** Combination of three (3) years IT experience, including one (1) year of experience in a project work, plus one (1) year of experience in the functional area of the project to be managed.
**Technical Project Lead II**

**Functional Responsibilities:** The Technical Project Lead II is responsible for adding technical expertise to the project which is of moderate risk and complexity and / or part of a larger program. Ensures that required resources such as manpower, systems, HW and applications, computer time, facilities, and the likes are available. Develops and maintains a technology project plan, which outlines a project’s tasks, milestone dates, status, and allocation of resources to stakeholders and other interested parties. Clearly defines and quantifies each step, as well as establishes concrete deadlines for each project milestone and deliverable. Must have a demonstrated ability to anticipate problems and to find resolutions before that problem can derail a major milestone or deliverable. Implements frequent changes to accommodate market and economic conditions that directly affect implementation costs, market viability, and the organization’s potential profit or loss on the project.

**Minimum Education:** B.S. degree in IT, Computer Science, or equivalent experience.

**Minimum Experience:** Combination of five (5) years IT experience, including three (3) years of experience in a project work, plus three (3) years of experience in the functional area of the project to be managed.

**Experience & Degree Substitution Equivalencies**
Experience exceeding the minimum shown may be substituted for education. Likewise, education exceeding the minimum shown may be substituted for experience.
