This is software that enables rapid interfacing among various sensor feeds (from satellites and other intelligence sources) and the other C4ISR systems. To accomplish this, AGIS software processes data from C4I systems and sensors into a common data format and then translates the data back into the required interface format across multiple domains all within 1/10,000th of a second. This software provides for automatically converting received intelligence data from both military and applicable commercial intelligence sources (i.e., AIS and ADS-B, etc.) into a form that enables interfacing U.S. and NATO C4I systems, such as Link 16 and OTH Gold formats to be understood and used by an properly authorized Navy C4I or Combat System. This a Cloud-based, but not Cloud dependent, C4I software designed to process 10,000s of satellite, UAV, and other sensor data and C4I data feeds to enable the fusion of data and the parsing of data. This fused data is synchronized and segregated into groups that are needed in order to properly view appropriate subsets of the vast amounts of available information.

Either by using On-Premises or Cloud servers, the computing load is so light that the entire system can be run on laptops. AGIS software provides interfaces to and translation between Link-16, OTH Gold, JVMF, CoT and NATO NFFI, ADEM and NVG enabling all users to have a true synchronized Common Operating Picture (COP). It is a downloadable App that operates on Windows, Android, and iOS that is seamlessly interoperable with the AWS GovCloud system and is available as a web client. This unique interoperability between the AGIS web systems and the downloaded App provides us the ability to connect to the actual sensor feeds and C4I data links. This capability permits the LifeRing MDDL system to continue to operate using dedicated radio communications in case of Cloud failure. It has been in continuous use by the US JS J6 in Suffolk, VA for over 11 years. To illustrate by example, if desired, fighter aircraft equipped with Link-16 can receive ship locations that may be outside of their radar range. Another example, expeditionary ground units near a shoreline can be made aware of commercial or military vessels approaching their vicinity. Third example, missile launch data can be relayed to all those in the direction flight path.

The AGIS software has been in use by Australia and other allied countries for many years and has been used by the U.S. Naval Research Lab to process classified and unclassified satellite provided intelligence. One example of our processing of Naval data was a SPAWAR exercise to validate that cellular and satellite communications could be combined to provide the U.S. Navy an ability to integrate cellular communications with Naval operations.

NOTE: The Transactional Data Reporting (TDR) Rule requires vendors to electronically report the price the federal government paid for an item or service purchased through GSA acquisition vehicles. The TDR PILOT APPLIES TO THIS SIN. If a TDR covered SIN(s) is included on a contract or offer with non-TDR SIN(s), then the entire contract is subject to TDR and the Price Reduction Clause (PRC) and Commercial Sales Practice (CSP) requirements are removed for the entire contract. However, the TDR clause does not exempt the contractor from existing reporting requirements found elsewhere in the contract.

1. INSPECTION/ACCEPTANCE

The Contractor shall only tender for acceptance those items that conform to the requirements of this contract. The ordering activity reserves the right to inspect or test any software that has been tendered for acceptance. The ordering activity may require repair or replacement of nonconforming software at no increase in contract price. The ordering activity must exercise its post acceptance rights (1) within a reasonable time after the defect was discovered or should have been discovered; and (2) before any substantial change occurs in the condition of the software, unless the change is due to the defect in the software.

2. ENTERPRISE USER LICENSE AGREEMENTS REQUIREMENTS (EULA)

The Contractor shall provide all Enterprise User License Agreements in an editable Microsoft Office (Word) format.

3. GUARANTEE/WARRANTY

a. Unless specified otherwise in this contract, the Contractor's standard commercial guarantee/warranty as stated in the contract's commercial pricelist will apply to this contract.

b. Limitation of Liability. Except as otherwise provided by an express or implied warranty, the Contractor will not be liable to the ordering activity for consequential damages resulting from any defect or deficiencies in accepted items.

4. TECHNICAL SERVICES

The Contractor, without additional charge to the ordering activity, shall provide a hotline Technical Support e-mail address support@agisinc.com for the purpose of providing user assistance and guidance in the implementation of the software.

5. SOFTWARE MAINTENANCE

a. Software maintenance as it is defined: (select software maintenance type) :
1. Software Maintenance as a Product (SIN 511210)
   Includes both term and perpetual software licenses and maintenance
   Annual Software Maintenance as a product is billed at the time of purchase.

2. Software Maintenance Services (SIN 54151)

   Covered by the Annual Software Maintenance Services are any upgrades or integration changes that may be required as the technologies in the operating environment are developed.

6. UTILIZATION LIMITATIONS - (SIN 511210, AND SIN 54151)
   a. Software acquisition is limited to commercial computer software defined in FAR Part 2.101.
   b. When acquired by the ordering activity, commercial computer software and related documentation so legend shall be subject to the following:
      (1) Title to and ownership of the software and documentation shall remain with the Contractor, unless otherwise specified.
      (2) Server Software licenses are by site and by ordering activity. Client Software licenses are per user.

BEST VALUE BLANKET PURCHASE AGREEMENT FEDERAL SUPPLY SCHEDULE

(Insert Customer Name)

In the spirit of the Federal Acquisition Streamlining Act (ordering activity) and (Contractor) enter into a cooperative agreement to further reduce the administrative costs of acquiring commercial items from the General Services Administration (GSA) Federal Supply Schedule Contract(s). Federal Supply Schedule contract BPAs eliminate contracting and open market costs such as: search for sources; the development of technical documents, solicitations and the evaluation of offers. Teaming Arrangements are permitted with Federal Supply Schedule Contractors in accordance with Federal Acquisition Regulation (FAR) 9.6.

This BPA will further decrease costs, reduce paperwork, and save time by eliminating the need for repetitive, individual purchases from the schedule contract. The end result is to create a purchasing mechanism for the ordering activity that works better and costs less.

BASIC GUIDELINES FOR USING “CONTRACTOR TEAM ARRANGEMENTS”
Federal Supply Schedule Contractors may use “Contractor Team Arrangements” (see FAR 9.6) to provide solutions when responding to a ordering activity requirements.

These Team Arrangements can be included under a Blanket Purchase Agreement (BPA). BPAs are permitted under all Federal Supply Schedule contracts.

Orders under a Team Arrangement are subject to terms and conditions or the Federal Supply Schedule Contract.

Participation in a Team Arrangement is limited to Federal Supply Schedule Contractors. Customers should refer to FAR 9.6 for specific details on Team Arrangements.

Here is a general outline on how it works:

x The customer identifies their requirements.

xFederal Supply Schedule Contractors may individually meet the customers needs, or x Federal Supply Schedule Contractors may individually submit a Schedules “Team Solution” to meet the customer’s requirement.

X Customers make a best value selection.
