Manufacturer: Arciem LLC dba Flying Logic

Manufacturer part number: FLY-ANN-01

Contractor part number: FLY-ANN-01

Product name: Flying Logic Annual Subscription

Product photo: "C:\SIPV9\Photo\FLoniMacwithBook.jpg"

Product description:

Flying Logic® provides an intuitive, CLEAN interface that enables fast knowledge capture, mapping out complex systems, ideation at the beginning of a change process (before project management is even a twinkle in the eye), and uncovering where the bottlenecks lie in any process.

Our SCIF-friendly software helps you not only gain clarity on the best course forward, but also helps you gain buy-in from stakeholders by visually representing the process of thought leading to those decisions, and accounting for potential undesirable effects.

NOTABLE Features / differentiators:

- Fast Knowledge Capture

Flying Logic’s simple gestural language is the shortest distance between your brain and the canvas. Annihilate procrastination and resistance to making changes on the fly

- Auto-Layout

Arguably Flying Logic’s most defining and unique feature, always-on auto-layout lets you focus on what the document you are building means, instead of worrying about how to lay it all out. Flying Logic takes care of all the layout and formatting details; you spend your time thinking through your plan, and watching changes happen “live” as you share your reasoning with others.

- Operable in SCIF Environments / Cloud-Free

A downloadable software client, Flying Logic only “phones home” to check for version updates, and even this may be disabled.

- Scripting

Flying Logic implements a powerful internal scripting language. You can use scripts to create or manipulate documents and change Flying Logic's application preferences. In addition, document importers and exporters can be written as scripts, including document transformation through Extensible Stylesheet Language Transformations (XSLT).

- Project Management

While Flying Logic's PM features are continuing to develop, it supports a popular subset of features that allow planners to use it as an adjunct to MSPProject and OmniPlan, including import and export functionality.

- Flying Logic Basics Course - INCLUDED

All active subscribers have access to Flight School, our video-based course in the basics of using Flying Logic, and the opportunity to go deeper with additional education via Flying Logic Academy.
