- Fire Station Alerting and Control Systems
- Automated Dispatch, Paging, Text and Email Notification Systems

The First-In Fire Station Alerting System is designed to provide all of the information necessary for crews to respond in the fastest possible manner. First-In uses ramped, cardiac-kind tones and visual display devices located throughout the station to give first responders the key information they need to respond. The First-In Fire Station Alerting System is a reliable, dependable, modular system that can be scaled for use in any department. First-In is widely used in career, volunteer, combination and military departments throughout the country.
