About the Helicopter: Airbus H125
The H125 (formerly the AS350 B3e) is a multi-mission workhorse with the best performance in its category. Built and certified in the United States, this cost-effective helicopter accommodates five to six passengers in all forward-facing seats. High performance, enhanced maneuverability and reduced pilot workload make Airbus Helicopters’ H125 the preferred rotary-wing aircraft for a growing number of U.S. civilian and government users. Airbus Helicopters has delivered more than 6,400 H125’s to customers around the globe who have logged a total of more than 33 million flight hours.

It is the high-performance version of the single engine Astar family, beating all other helicopters in its category in terms of performance. The H125 offers fast cruise speeds, 30-minute take-off power, long engine TBOs (6,000 hours mature) and low Direct Maintenance Cost (DMC). It offers a maximum take-off weight of 5,225lbs, and a maximum take-off weight with an external load transportation configuration of 6,172 lbs. with a useful load/payload of 2,362 lbs.

Its new Safran ARRIEL 2D engine is equipped with an upgraded triple engine control: one dual channel FADEC (Full Authority Digital Engine Control) unit plus a third independent & automatic backup channel. This modern engine is fitted with an Engine Data Recorder (EDR) that manages cycle counts & usage tracking thus paving the way for more predictive maintenance. Engine TBO and maintenance inspection intervals are extended, and consequently reducing operating cost.

All this makes the H125 perfectly suited for all types of mission profiles, such as aerial work, firefighting, law enforcement, VIP and business passenger transport, and Search and Rescue, especially in hot & high and extreme environments. It demonstrated its tremendous capabilities while breaking the World Record for the highest altitude landing and take-off on top of Mt. Everest.

About the Helicopter: Airbus H135

Pricing Information
The H135 is the unbeaten market leader in modern light twin-engine multi-purpose helicopters with up to 8 seats for pilots and passengers. High performance, fast cruise speeds, enhanced maneuverability and reduced pilot workload make Airbus Helicopters’ H135 the preferred rotary-wing aircraft for a growing number of U.S. hospitals, civilian and government users. The H135 offers a maximum take-off weight of 6,570 lbs. and a useful load of 3,125 lbs. Airbus Helicopters has delivered more than 1,300 H135’s to customers around the globe who have logged a total of more than 4.5 million flight hours.

The H135 can be powered by either Safran Helicopter Engines Arrius 2B2+ or Pratt & Whitney Canada PW206B3 engines - both are FADEC controlled and provide efficient fuel burn characteristics. These powerful and reliable engines, combined with the improved dynamic lifting system components, provide outstanding performance and vital power reserves especially in One Engine Inoperative (OEI) scenarios, and in all flight regimes including demanding High & Hot conditions. These modern engines are fitted with an Engine Data Recorder (EDR) that manages cycle counts & usage tracking thus paving the way for more predictive maintenance.

The H135 features a Helionix avionics suite, an avionics system designed by Airbus Helicopters offering increased mission flexibility and safety. Helionix has a 4-axis autopilot that significantly reduces the workload of the pilot and brings the H135 to an unrivalled level of safety due to the additional functions and mission features it adds to the H135’s capability. Helionix also offers an innovative cockpit layout which helps to increase situational awareness. Designed with three large electronic displays, the cockpit is Night Vision Goggle compatible and includes a First Limit Indicator which highlights the appropriate engine instrument data for the pilot in one indicator.

All this makes the H135 perfectly suited for all types of mission profiles for this class of helicopters including emergency medical services, law enforcement, VIP and business passenger transport, maintenance of industrial wind parks, and military training. Airbus Helicopters is convinced the H135 is the best solution to prepare the next generation of U.S. Navy pilots for decades to come, both technically and economically.
