Epsilon Series Radios and Alpha Integrated Video Systems

Delivery:

Product delivery schedule will be provided at time of receipt of individual orders. However, standard delivery is within 120 days from receipt of written order when customer frequency requirements are provided with order.

Due to site specific and use variables, antennas not included in the product price, unless specifically noted in the product description.

Radio Repair Service Availability:

L-3 GSI will furnish radio repair service in accordance with Special Item 246-50 Ancillary Services at a rate of \$236.76 per hour with 4 hour minimum charge; charges computed to nearest half hour after minimum charge.

Acceptance of Equipment:

Government acceptance of equipment is deemed to have occurred within 30 days of receipt of equipment.

Epsilon Radio and Alpha Integrated Video System Warranty:

Title conveys at acceptance. Products acquired will be repaired or replaced, without charge, for equipment failure for a period of one year after the date of shipment. Warranty does not include cosmetic blemishes or non-operational aspects of the product/system/subsystem. L-3 GSI does not warrant merchantability or fitness for particular purpose; therefore 52.212-4 implied warranty is excluded from the terms of this item.

Warranty or repair of products will be performed via a mail-in service to the following address: 6 Armstrong Road, Shelton, CT 06484. It is the Government's responsibility to provide transportation (shipping) to L-3 GSI to include proper packaging and insurance if necessary. L-3 GSI will provide return standard group transportation for such units mailed in for service. Any costs to repair equipment received at L-3 GSI with physical damage due to improper packaging/shipping will be borne by the Government.

All repair service of a specific malfunction is guaranteed for a period of 60 days (void if due to fault or negligence of the Government or third party).

EPSILON SERIES

The EPSILON Series is a low-cost, solid-state, point-to-point wireless radio system operating in a variety of available bands to suit any requirement. The system utilizes state-of-the-art technology and the latest microstrip design to provide maximum reliability. The system uses modular construction of all RF and electronic assemblies to allow easy access for maintenance, field upgrading, and expansion.

The EPSILON Series is designed to provide a highly-reliable Ethernet link that is well suited for telecommunication interconnections. The system consists of a lightweight outdoor RF unit and indoor control unit with media conversion units. The transmitter RF unit contains a Gunn diode oscillator — or active multiplier — that is directly modulated by the digital interface signal and is frequency-tunable. The high-stability synthesizer maintains the proper operating frequency under stringent environmental conditions. The receiver RF unit uses a Gunn diode oscillator and a mixer/pre-amplifier to convert the input microwave signal to an intermediate frequency. The IF is then fed to the receiver terminal processor board where a phase-lock circuit maintains the proper IF frequency. Delivery - 120 days from receipt of order which includes customer required frequencies. Antennas not included in price unless specifically noted in product description.

EPSILON SDC155 SERIES

The EPSILON SDC155 (Scalable Digital Carrier) is a low-cost, feature-rich, point-to-point wireless radio system. The SDC155 supports all frequency bands from 7 to 26 GHz to suit any telecommunications requirement. The modulation and data throughput rates are QPSK-128QAM and 1-155 Mbps, respectively. A highly flexible Web Browser Management System, along with an embedded SNMP agent, provides an easy-to-use tool for monitor and control. The SDC155 supports a complete range of capabilities for building flexible wireless network solutions. The SDC155 is designed to provide a highly-reliable and compact digital radio package. The split mount configuration consists of a radio frequency unit (RFU) and an indoor control unit (IdCU). The design of the SDC155 is based on state-of-the-art ASIC chip architecture. The ultra-high, stable synthesizer in the RFU maintains the proper operating frequency under stringent environmental conditions. Forward error correction (FEC) is incorporated in the IdCU with selectable coding rates and digital filtering for various data bandwidths. The SDC155 is designed to support 1+0 and 1+1 protected and east/west loop systems, all in a one-rack unit chassis. The field upgradeable design reduces both capital and operating budgets for field installation, maintenance, training and spares while providing maximum product reliability. Delivery - 120 days from receipt of order which includes customer required frequencies. Antennas not included in price unless specifically noted in product description.
