Seattle, WA 98105

**15. Warranty Provision:** N/A

**16. Export Packing Charges:** N/A

**17. Terms and conditions of Government purchase card acceptance:** Please contact Environment International.

**18-24:** Not applicable

**25. DUNS Number:** 88-372-8941

**26. Contractor is registered in SAM database:** Yes

## **Description of Services:**

### **SIN 899-1 - Environmental Planning Services & Documentation, SIN 899-1 RC**

Environment International Ltd. (EI) delivers the highest quality planning and documentation services that are fully compliant with all environmental regulations and standards. EI's strength lies in the multidisciplinary nature of our approach to environmental issues and EI's team approach ensures that all facets of issues - legal, scientific, engineering, economic, and community perceptions - are analyzed and taken into account.

EI's service areas include human health and ecological risk assessments, injury assessments and natural resource damage assessments (NRDAs), environmental management systems (EMSs) under ISO 14001 and other standards, environmental restoration plans, policy and regulatory analyses, public comment documentation and responses to public comments, NEPA-compliant environmental impact statements (EISs) and assessments, endangered species plans, integrated resource management plans and environmental justice documentation. In addition, EI provides expert services in spill prevention, control and countermeasures (SPCC) and emergency planning and is a leader in risk communication.

EI is one of the nation's leaders in environmental compliance auditing, compliance management planning, environmental management systems (EMSs) and pollution prevention. We help our clients identify ways to comply with the law, minimize environmental impacts and save money. With two RAB-certified ISO 14001 Lead Auditors, our compliance team has conducted hundreds of days of audits for a variety of clients. We have provided numerous environmental compliance audits and compliance training to government agencies, private companies and tribes in the United States and abroad. We have expertise in determining applicable laws, statutes and regulations; conducting audits regarding these laws, statutes and regulations; evaluating the findings of these audits; preparing necessary documentation and reports; and translating this information into useful materials so an agency can meet its regulatory demands cost-effectively. We can help develop EMSs from the initial planning stages through implementation and evaluation.

EI is well prepared to assist agencies with the technical and regulatory aspects of hazardous waste management. Our risk assessment experts have worked on some of the highest profile hazardous waste sites and oil spills in the country and have served as expert witnesses. We can assist in both the scientific and planning aspects of Brownfields redevelopment and assist in reducing costs related to hazardous waste liabilities. In addition, EI is one of the leaders in providing advice and support in regards to natural resource damage assessments (NRDAs), including injury assessments, damage valuations and restoration planning. EI's senior consultants and staff have worked on NRD matters for decades, advising private parties and all levels of government, conducting neutral reviews of oil spill contingency planning and emergency response, and providing advice on the integration of natural resource injury

assessment with oil spill response and the RI/FS process during hazardous site cleanup. The multidisciplinary skills of EI personnel in engineering, scientific, legal, and policy-related fields are particularly well suited to NRDA projects, which require extensive knowledge of both science and law.

EI experts have undertaken emergency response for oil spills and releases of hazardous materials; provided strategic litigation support advice on legal/technical case development; conducted preliminary assessment screens and performed injury assessment; identified, developed and implemented restoration plans for some of the United State's highest profile cases; and provided project management for several of the country's most complex sites. For federal and state agencies involved in NRDA and response, EI has facilitated interactions among technical personnel, attorneys and stakeholders in the range of contexts noted above, using a variety of tools, including conceptual and numeric models. EI has compiled and analyzed some of the largest data sets in the world for natural resource injury assessment, and has worked on more than one "mega-site" where potential injuries are spread across hundreds of square miles and injuries can be hidden from view in subsurface terrestrial and aquatic environments.

Under this SIN, we are offering the following services:

- Economic, Technical and Risk Analyses in support of environmental needs
- Emergency Response and Risk Communication Plans
- Environmental Impact Statements & Assessments under NEPA
- Endangered Species and other Natural Resource Plans, Studies and Consultations
- Natural Resource Damage Assessments
- Archaeological, Historic and other Cultural Resources Management Plans
- Spill Prevention, Control and Countermeasures (SPCC) Planning
- Environmental Program Management
- Environmental Regulation Development
- Environmental Management System (EMS) Development, Implementation and Auditing
- ISO 14001 EMS Auditing and Development
- Environmental Compliance Audits

### **SIN 899-3 - Environmental/Occupational Training Services, SIN 899-3 RC**

EI has received wide acclaim for providing effective and powerful training, seminars, public education, and outreach services regarding a wide variety of topics. We excel at providing customized training tailored to the needs of our audience. Our extensive experience has ranged from educating small communities on regulatory requirements to providing training to federal agency employees around the country on RCRA and CERCLA cleanup processes, environmental compliance, EMSs and auditing. Through trainings and workshops, we have educated state and local agency personnel on integration of ESA requirements with state regulations.

EI is able to design training services related to the following topics

- Natural Resource Damage Assessment (NRDA)
- Environmental Management System (EMS) and ISO 14001 Audits
- Risk Communication and Emergency Response
- Risk Assessment and Hazardous Waste Management

- Pollution Prevention and Sustainable Development
- Brownfields Redevelopment
- Community Outreach
- Endangered Species Act (ESA) analysis, planning and implementation
- Regulatory Analysis and Development

**To use this GSA contract, follow these few steps:**

1. Initiate the process by providing your Contracting Officer (CO) with a statement of work (SOW) and identifying the GSA Environmental Services contract as the vehicle to issue your order.
2. Ask your CO to issue your SOW to EI and two other approved GSA Environmental Services contractors.
3. You and your CO review each contractor's response and select the "best value" contractor.
4. Your CO issues an order directly to the selected contractor.

#For more information from GSA about this schedule, see [www.gsa.gov](http://www.gsa.gov).

\*The Service Contract Act (SCA) is applicable to this contract as it applies to the entire environmental schedule and all services provided. While no specific labor categories have been identified as being subject to SCA due to exemptions for professional employees (FAR 22.1101, 22.1102 and 29 CFR 541.300), this contract still maintains the provisions and protections for SCA eligible labor categories. If and/or when the contractor adds SCA labor categories/employees to the contract through the modification process, the contractor must inform the Contracting Officer and establish a SCA matrix identifying the GSA labor category titles, the occupational code, SCA labor category titles and the applicable WD number. Failure to do so may result in cancellation of the contract.
