    12-year warranty. See all GSA Warranty Terms on page 3 of this
    price list.
Recycling

Approximately 99 percent of hazardous waste is collected, processed and turned into fuel disposed of beneficially as a supplemental fuel in cement kilns. Used finishing materials, including stains and solvents, are recycled or fuel-blended, resulting in almost no final waste by-product. Wood waste, including scrap lumber and particleboard, is ground, mixed with sawdust and recycled to outside sources for reuse. Cardboard, metals, plastics and office paper are recycled. Through these initiatives alone, Geiger reduced the amount of waste sent to landfill by 86 percent in less than one year.

Indoor Environmental Quality

Geiger is solving the problem of air emissions due to VOCs through several measures, including:

• the introduction of water-based finishes
• the conversion from solvent-based to water-based adhesives
• the introduction of water-based stains
• the introduction of robotic spray equipment
• the introduction of UV-cured, roll-coat technology
• a reduction in the amount of solvents used for clean-ups

With the help of its suppliers, Geiger was one of the first companies in the world to develop and use water-based urethane finishes. With ANSI standards for product emissions.

Not applicable

EPA Partnership

Geiger began tackling the problem of air emissions from volatile organic compounds (VOCs) decades ago. Starting in 1988, Geiger participated in an initiative piloted by the Environmental Protection Agency (EPA) to reduce VOC emissions. Geiger exceeded the goal, reducing emissions by 81 percent. Today, Geiger continues to incorporate technology that further reduces emissions, though the EPA initiative has officially ended.

LEED

Geiger products can contribute to LEED credits for construction waste management, recycled content, regional materials, low-emitting materials, certified wood and innovation in design, depending on the project.

Materials

Wood veneer itself is an efficient use of resources. Veneer is sliced from logs into leaves, usually 0.4mm to 0.7mm in thickness. The leaves of veneer are then pressed onto a stable substrate. Using veneer in this way is not only an appropriate and respectful way of using wood, but the result is a much more stable surface that lasts.

Particleboard and medium-density fiberboard used by Geiger meet the Composite Panel Association’s Environmentally Preferable Product specification. The boards are made from 100 percent recycled or recovered fiber, which is mixed with resin to create a very stable substrate. The result is a board that is fully compliant with ANSI standards for product emissions.

Geiger is solving the problem of air emissions due to VOCs through several measures, including:

• the introduction of water-based finishes
• the conversion from solvent-based to water-based adhesives
• the introduction of water-based stains
• the introduction of robotic spray equipment
• the introduction of UV-cured, roll-coat technology
• a reduction in the amount of solvents used for clean-ups

With the help of its suppliers, Geiger was one of the first companies in the world to develop and use water-based urethane finishes. In addition, Geiger employs an environmentally friendly finishing process (UV-cured roll-coating), which virtually eliminates VOCs. In addition, NAF (no-added-formaldehyde) board is available upon request.

CCR Registration

Currently Registered Cage Code: 58HQW8, Active

Replacements/Restocking Policy: Written authorization must be obtained from Geiger prior to any return being sent to Geiger. The government customer is responsible for any and all freight costs associated with a return. Geiger will negotiate any restocking fees with the government in line with Geiger commercial practice, and they shall not exceed 25%.

Cancellation Policy: No charge prior to production. After production has begun, charges are only actual costs that the contractor can demonstrate if the items are not sold in a reasonable length of time (4 months).

24. Environmental Attributes
   Geiger is building an infrastructure that preserves and enhances economic vitality and environmental health across all of our activities, today and tomorrow. Geiger has committed to a set of dramatic sustainability targets, all aimed at a zero environmental footprint by 2020.

   12-Year Warranty
   Geiger offers one of the longest warranties in the industry: 12 years. Geiger products are engineered to be durable, in manufacture and in design.

   Renewable Energy
   Geiger products made in the United States are manufactured at facilities that are powered entirely by Green-e® renewable energy, making them 100 percent carbon neutral in the use of electrical energy.

   Recycling
   Approximately 99 percent of hazardous waste is collected, processed and turned into fuel disposed of beneficially as a supplemental fuel in cement kilns. Used finishing materials, including stains and solvents, are recycled or fuel-blended, resulting in almost no final waste by-product. 24. Environmental Attributes
   Geiger is building an infrastructure that preserves and enhances economic vitality and environmental health across all of our activities, today and tomorrow. Geiger has committed to a set of dramatic sustainability targets, all aimed at a zero environmental footprint by 2020.

   12-Year Warranty
   Geiger offers one of the longest warranties in the industry: 12 years. Geiger products are engineered to be durable, in manufacture and in design.

   Renewable Energy
   Geiger products made in the United States are manufactured at facilities that are powered entirely by Green-e® renewable energy, making them 100 percent carbon neutral in the use of electrical energy.

   Recycling
   Approximately 99 percent of hazardous waste is collected, processed and turned into fuel disposed of beneficially as a supplemental fuel in cement kilns. Used finishing materials, including stains and solvents, are recycled or fuel-blended, resulting in almost no final waste by-product. Wood waste, including scrap lumber and particleboard, is ground, mixed with sawdust and recycled to outside sources for reuse. Cardboard, metals, plastics and office paper are recycled. Through these initiatives alone, Geiger reduced the amount of waste sent to landfill by 86 percent in less than one year.

   EPA Partnership
   Geiger began tackling the problem of air emissions from volatile organic compounds (VOCs) decades ago. Starting in 1988, Geiger participated in an initiative piloted by the Environmental Protection Agency (EPA) to reduce VOC emissions. Geiger exceeded the goal, reducing emissions by 81 percent. Today, Geiger continues to incorporate technology that further reduces emissions, though the EPA initiative has officially ended.

   LEED
   Geiger products can contribute to LEED credits for construction waste management, recycled content, regional materials, low-emitting materials, certified wood and innovation in design, depending on the project.

   Materials
   Wood veneer itself is an efficient use of resources. Veneer is sliced from logs into leaves, usually 0.4mm to 0.7mm in thickness. The leaves of veneer are then pressed onto a stable substrate. Using veneer in this way is not only an appropriate and respectful way of using wood, but the result is a much more stable surface that lasts.

   Particleboard and medium-density fiberboard used by Geiger meet the Composite Panel Association’s Environmentally Preferable Product specification. The boards are made from 100 percent recycled or recovered fiber, which is mixed with resin to create a very stable substrate. The result is a board that is fully compliant with ANSI standards for product emissions.

   Indoor Environmental Quality
   Geiger is solving the problem of air emissions due to VOCs through several measures, including:
   • the introduction of water-based finishes
   • the conversion from solvent-based to water-based adhesives
   • the introduction of water-based stains
   • the introduction of robotic spray equipment
   • the introduction of UV-cured, roll-coat technology
   • a reduction in the amount of solvents used for clean-ups

   With the help of its suppliers, Geiger was one of the first companies in the world to develop and use water-based urethane coatings. In addition, Geiger employs an environmentally friendly finishing process (UV-cured roll-coating), which virtually eliminates VOCs. In addition, NAF (no-added-formaldehyde) board is available upon request.

25. Data Universal Number Systems (DUNS Number)
   09-930-8603

26. CCR Registration
   Currently Registered Cage Code: 58HQW8, Active

   Returns/Restocking Policy: Written authorization must be obtained from Geiger prior to any return being sent to Geiger. The government customer is responsible for any and all freight costs associated with a return. Geiger will negotiate any restocking fees with the government in line with Geiger commercial practice, and they shall not exceed 25%.

   Cancellation Policy: No charge prior to production. After production has begun, charges are only actual costs that the contractor can demonstrate if the items are not sold in a reasonable length of time (4 months).
