Commercial Job Title : Senior Software Engineer

Minimum/General Experience: Ten or more years of progressive, directly related experience that includes the design, development and implementation of business computer systems and programs, at least four of the required years should have been in a supervisory capacity.

Functional Responsibility: Requires specialized subject matter expertise in the principles and techniques of systems design, programming, and project management as well as extensive, directly related and progressive experience. Knowledge is applied to research and evaluation involving innovative solutions and alternatives. Make decisions of critical consequence impacting administration and management of major, broad organizational services and long range goals. Has first level supervisory responsibility for managing several project teams/units with subordinate professional supervisors. Most frequently meets with administrators, directors and administrative staff or functional and programmatic subject area specialist to plan and direct activities, implement decisions, justify or defend decisions and negotiate or settle significant and/or controversial issues.

Example of Duties: Analyze and evaluate information processing problems, plans, procedures and requirements of organizations. Formulate and express ideas on difficult and complex concepts in a clear and effectively presented manner, both orally and in writing. Prepare work plans, and time and cost estimates for projects and proposed systems. Direct and coordinate assigned project teams through subordinate supervisors. Read, interpret, and apply the information contained in complex technical publications, manuals, and other documents. Apply new developments in the field of data processing and related equipment and technology. Plan, prepare and conduct training classes for data processing personnel. Develop long- and short-range plans for systems development and the utilization of resources.

Possible Job Titles: Senior Programmer, Senior Systems Analyst, Senior Technical Advisor, Senior Programmer/Analyst, Senior Systems Developer, Senior Web Developer, Senior Project Manager.

Minimum Education: Advanced degree in related subject area or Bachelor's degree and six years practical experience.

GSA Labor Rate: \$151.12

Commercial Job Title: Senior Network Engineer

Minimum/General Experience: Eight years' experience with at least three years of full time experience in the design, development, integration, implementation and /or maintenance of multi-protocol local and/ or wide area networks, and telecommunications system. Function as technical consultant to the business units

Functional Responsibility: Management level personnel provide general direction. Responsibilities include functional or technical supervision of lower level professional, technical or clerical positions. Positions in this class are distinguished from other related classes in that they require specialized subject matter expertise in the design/operation of network systems including LANs and WANs; knowledge is applied to research and evaluation involving innovative solutions and alternatives. Positions in this class are distinguished from those in the Network Engineer class by: the advance level of technical expertise, experience and ability to evaluate solutions for networking requirements; making recommendations which have significant impact or consequences including the development of new policies, procedures and service.

Examples of Duties: Identifies, isolates, trouble-shoots and resolves operational problems related to local and wide area network systems (LAN/WAN); tests hardware and transmission media; communicates with users regarding network failures and malfunctions; determines whether problems are due to hardware, software, cabling system, or operator error; operates a variety of diagnostic and test equipment; provides technical expertise to personnel, administrators, and users concerning LAN/WAN concepts, operations and problems including a variety of platforms; communicates with internal staff regarding equipment, circuit failures, parts and network operations; researches and analyzes problems and equipment; answers calls for installations of printers, software; responds to Help Desk tickets and call tickets; utilizes portable test equipment to identify and resolve problems on-site; maintains records related to network installation and trouble calls; confers with users regarding basic and prospective needs for network requirements and services; assists other technical support staff and engineers to assure optimum system availability; follows department established standards to ensure network system security; monitors systems to support and control network traffic; follows back-up, restart and recovery procedures for network applications; reads literature, attends classes, confers with colleagues, etc. to maintain and develop knowledge of industry trends, innovations, new designs; evaluates security needs in order to establish system configurations and operating procedures; evaluates and recommends network methods, upgrades, components and applications for a wide variety of systems to achieve optimal efficiency; consults with technical and managerial personnel to recommend solutions to identified problems affecting network applications and systems; conducts on-site surveys to analyze and recommend network plans; formulates operational designs of a creative and innovative nature for the development and maintenance of LANs and WANs including connections to a large mainframes; prepares technical specifications to be used in requests for proposals or quotations for hardware and software applications; develops procedures manuals, updating operational procedures and notification/training of users relevant to LANs/WANs; evaluates and recommends viable system alternatives, products, and services to existing network configurations; trains employees on systems and procedures, sets priorities, reviews their work and provides input on evaluations; resolves difficult or complex network problems through on-site analysis at different locations, , and also through the vendors; devises and implements strategies for connection of independent networks.

Riley Technology Solutions

IT – 70 Schedule Contract No. GS35F0080V

Commercial Job Title: Project Manager Level 3

Minimum/General Experience: Eight years' experience in the design, development, and implementation of business or computer systems and programs. At least three years acting in a management role of a large multi-task program. Knowledge of the Federal contract and procurement regulations.

Functional Responsibility: Develop overall work plans, schedules, evaluation criteria, and assist in utilizing resources in the most effective and efficient manner; confer with personnel in feasibility studies, systems, planning equipment scheduling, and activities as assigned. Enforce established applications programming, and documentation; review the work effectiveness, task effectiveness and compatibility with other projects in related areas; supervise the preparation and administration of the budget for assigned areas of responsibility; participate in the preparation of the budget; develop, review, and enforce policies, practices and standards, including programming and documentation standards; review technical training needs for subordinate staff, plan activities implement training courses as appropriate and assure attendance by appropriate staff as required; maintain liaison with management and government personnel; communicate, coordinate, and cooperate with staff members to assure that the Network and Information Services is operating at maximum efficiency; supervise and participate in the selection, training, and evaluation of staff members; perform related duties as assigned.

Examples of Duties: Duties may include, but are not limited to the following: Plan, organize and administer program activities and services; select, train, supervise and evaluate the performance of staff; serve as resource to staff; prepare and implement a marketing strategy to promote the program services; make presentations to groups and clients; develop budgets and oversee administration of program budget components; identify funding sources and work with accounting personnel to ensure that accounts follow funding source regulations and requirements; make financial projections which may combine funding from different sources; prepare and negotiate contracts for the delivery of program services, negotiate contracts for services performed for the program by individual consultants; assist in the development and implementation of project or program policy guidelines and procedures; make suggested revisions and implement changes; developments and strategies affecting program objectives and results; prepare specialized reports, surveys and other program descriptive information and materials; monitor program data and information collection methods and techniques, perform related duties as assigned.

Possible Job Titles: Software Quality Assurance Manager, Software Manager.

Minimum Education: Bachelor's degree in computer science, engineering, mathematics, business, plus 4 years practical experience.

GSA Labor Rate: \$100.75

Commercial Job Title: Project Manager Level 4

Minimum/General Experience: Ten years' experience in the design, development, and implementation of business or computer systems and programs. At least six years acting in a management role of a large multi-task program. Knowledge of the Federal contract and procurement regulations.

Functional Responsibility: Develop overall work plans, schedules, evaluation criteria, and assist in utilizing resources in the most effective and efficient manner; confer with personnel in feasibility studies, systems, planning equipment scheduling, and activities as assigned. Enforce established applications programming, and documentation; review the work effectiveness, task effectiveness and compatibility with other projects in related areas; supervise the preparation and administration of the budget for assigned areas of responsibility; participate in the preparation of the budget; develop, review, and enforce policies, practices and standards, including programming and documentation standards; review technical training needs for subordinate staff, plan activities implement training courses as appropriate and assure attendance by appropriate staff as required; maintain liaison with management and government personnel; communicate, coordinate, and cooperate with staff members to assure that the Network and Information Services is operating at maximum efficiency; supervise and participate in the selection, training, and evaluation of staff members; perform related duties as assigned.

Examples of Duties: Duties may include, but are not limited to the following: Plan, organize and administer program activities and services; select, train, supervise and evaluate the performance of staff; serve as resource to staff; prepare and implement a marketing strategy to promote the program services; make presentations to groups and clients; develop budgets and oversee administration of program budget components; identify funding sources and work with accounting personnel to ensure that accounts follow funding source regulations and requirements; make financial projections which may combine funding from different sources; prepare and negotiate contracts for the delivery of program services, negotiate contracts for services performed for the program by individual consultants; assist in the development and implementation of project or program policy guidelines and procedures; make suggested revisions and implement changes; developments and strategies affecting program objectives and results; prepare specialized reports, surveys and other program descriptive information and materials; monitor program data and information collection methods and techniques, perform related duties as assigned.

Possible Job Titles: Lead Quality Assurance Manager, Software Manager.

Minimum Education: Bachelor's degree in computer science, engineering, mathematics, business, plus 6 years practical experience.

GSA Labor Rate: \$108.04

Commercial Job Title: System Software Analyst Level 1

Minimum/General Experience: Four years of directly related experience in the design, development and implementation of systems software and/or business application systems for computer system using advanced programming languages.

Functional Responsibility: Requires specialized subject matter expertise in operating systems and related system software for computers in a large multi-user environment; The characteristics, capabilities, and uses of operating system components and related vendor supplies and software packages; Software systems including coding and assembly level, procedural and non-procedural, and job control languages; Operating systems and database systems, and teleprocessing systems; As well as extensive directly related and progressive experience; Knowledge is applied to research and evaluation significant impact or consequence involving highly specialized and technical areas impacting recommendations and development of new policies, procedures and services.

Example of Duties: Duties may include, but are not limited to the following: Design, code, implement, maintain, and evaluate computer operating software; Analyze existing hardware products and related commercial software packages to determine the feasibility of using existing products in place of developing new software in-house; Prepare technical specifications to be used in requests for proposals or quotations; Evaluate the impact of new applicants to determine their impact on existing operations and system software and system performance; Consult with technical and managerial personnel, and recommend solutions to identify problems affecting operating systems performance; Recommend technical standards and policies; Perform operating system generations; Analyze and coordinate with vendors for new versions of operating systems; Develop and implement procedures for back-up, restart, and recovery of all software components and major files; Coordinate with technical personnel of vendors for troubleshooting, maintaining, and implementing new software and hardware components to operating systems; Analyze computer performance statistics and make changes to the appropriate software components to attain maximum system performance; Coordinate with and assist staff members in implementing, maintaining, and troubleshooting teleprocessing, database, and other system software; Prepare and conduct training sessions for operations and programming personnel regarding programming and operation techniques and software concepts; Coordinate with application systems and programming personnel, and assist and advise them in the diagnosis and correction of software and hardware problems associated with application programs; May develop, program, and implement data center support systems; perform related duties as assigned.

Possible Job Titles: Web Developer, Graphic Designer, Multimedia Designer, Webmaster, Document Imaging/Management programmer, Database Administrator, Help-Desk Manager, Senior Test Specialist, Tester, LAN/WAN Specialist, Documentation Specialist and Scriptor.

Minimum Education: A Bachelor's degree with major coursework in computer science, engineering, mathematics.

Riley Technology Solutions

IT – 70 Schedule Contract No. GS35F0080V

GSA Labor Rate: \$77.43

Commercial Job Title: System Software Analyst Level 2

Minimum/General Experience: Five years' experience in the design, development and implementation of systems software and/or business application systems for computer system using advanced programming languages.

Functional Responsibility: Requires specialized subject matter expertise in operating systems and related system software for computers in a large multi-user environment; The characteristics, capabilities, and uses of operating system components and related vendor supplies and software packages; Software systems including coding and assembly level, procedural and non-procedural, and job control languages; Operating systems and database systems, and teleprocessing systems; As well as extensive directly related and progressive experience; Knowledge is applied to research and evaluation significant impact or consequence involving highly specialized and technical areas impacting recommendations and development of new policies, procedures and services; Most frequently meets with administrative staff.

Example of Duties: Duties may include, but are not limited to the following: Design, code, implement, maintain, and evaluate computer operating software; Analyze existing hardware products and related commercial software packages to determine the feasibility of using existing products in place of developing new software in-house; Prepare technical specifications to be used in requests for proposals or quotations; Evaluate the impact of new applicants to determine their impact on existing operations and system software and system performance; Consult with technical and managerial personnel, and recommend solutions to identify problems affecting operating systems performance; Recommend technical standards and policies; Perform operating system generations; Analyze and coordinate with vendors for new versions of operating systems; Develop and implement procedures for back-up, restart, and recovery of all software components and major files; Coordinate with technical personnel of vendors for troubleshooting, maintaining, and implementing new software and hardware components to operating systems; Analyze computer performance statistics and make changes to the appropriate software components to attain maximum system performance; Coordinate with and assist staff members in implementing, maintaining, and troubleshooting teleprocessing, database, and other system software; Prepare and conduct training sessions for operations and programming personnel regarding programming and operation techniques and software concepts; Coordinate with application systems and programming personnel, and assist and advise them in the diagnosis and correction of software and hardware problems associated with application programs; May develop, program, and implement data center support systems; perform related duties as assigned.

Possible Job Titles: Web Developer, Sr. Graphic Designer, Multimedia Designer, Document Imaging/Management programmer, Database Administrator, Help-Desk Manager, Senior Test Specialist, LAN/WAN Specialist, Documentation Specialist, Webmaster and Scriptor, CAD Operator, Senior Customer Support Specialist.

Minimum Education: A Bachelor's degree with major coursework in computer science, engineering, mathematics, or related field, with 1-year practical experience.

GSA Labor Rate: \$88.68

Commercial Job Title: System Software Analyst 3/Multi. Specialist Level 11

Minimum/General Experience: Six years of directly related experience in the design, development and implementation of systems software and/or business application systems for computer system using advanced programming languages.

Functional Responsibility: Requires specialized subject matter expertise in operating systems and related system software for computers in a large multi-user environment; The characteristics, capabilities, and uses of operating system components and related vendor supplies and software packages; Software systems including coding and assembly level, procedural and non-procedural, and job control languages; Operating systems and database systems, and teleprocessing systems; As well as extensive directly related and progressive experience; Knowledge is applied to research and evaluation significant impact or consequence involving highly specialized and technical areas impacting recommendations and development of new policies, procedures and services; Has functional or technical supervision over lower level positions of Systems Software Analyst I & II; Most frequently meets with administrative, management, and professional staff, as well as functional and/or programmatic subject matter specialists to influence, motivate and to act as a liaison for a program or department.

Example of Duties: Duties may include, but are not limited to the following: Design, code, implement, maintain, and evaluate computer operating software; Analyze existing hardware products and related commercial software packages to determine the feasibility of using existing products in place of developing new software in-house; Prepare technical specifications to be used in requests for proposals or quotations; Evaluate the impact of new applicants to determine their impact on existing operations and system software and system performance; Consult with technical and managerial personnel, and recommend solutions to identify problems affecting operating systems performance; Recommend technical standards and policies; Perform operating system generations; Analyze and coordinate with vendors for new versions of operating systems; Develop and implement procedures for back-up, restart, and recovery of all software components and major files; Coordinate with technical personnel of vendors for troubleshooting, maintaining, and implementing new software and hardware components to operating systems; Analyze computer performance statistics and make changes to the appropriate software components to attain maximum system performance; Coordinate with and assist staff members in implementing, maintaining, and troubleshooting teleprocessing, database, and other system software; Prepare and conduct training sessions for operations and programming personnel regarding programming and operation techniques and software concepts; Coordinate with application systems and programming personnel, and assist and advise them in the diagnosis and correction of software and hardware problems associated with application programs; May develop, program, and implement data center support systems; perform related duties as assigned.

Possible Job Titles: Web Developer, Sr. Graphic Designer, Multimedia Designer/Specialist, Document Imaging/Management programmer, Database Administrator, Help-Desk Manager, Senior Test Specialist, LAN/WAN Specialist, Documentation Specialist and Scriptor.

Possible Job Titles: Web Developer, Sr. Graphic Designer, Multimedia Designer/Specialist, Document Imaging/Management programmer, Database Administrator, Help-Desk Manager, Principal Technical Advisor, Senior Test Specialist, LAN/WAN Specialist, Documentation Specialist.

Minimum Education: A Bachelor's degree with major coursework in computer science, engineering, mathematics, or related field, with 6 years practical experience.

GSA Labor Rate: \$124.96

Commercial Job Title: System Engineer

Minimum/General Experience: Six years of progressive experience in the design, analysis, programming and implementation of system designs and operation systems.

Functional Responsibility: Contributes to the development and implementation of systems methods, procedures, and standards necessary to maintain the integrity, reliability, and maintainability of systems. Apply structured methodology to the planning, oversight, and status communication of a project with an understanding of object-oriented technologies for project management. Proficient with the principles of risk assessment and requirements specification. Understanding of requirements from clients and how to identify project risks. Familiarity with techniques used in each stage of development and understanding how decision made at each stage affect the life cycle of the project. Perform quality assurance function. Assists other staff members in the development of project plans, specifications and in the monitoring of progress. Works with minimal management supervision. Must possess the following skill:

- ® Minimum of three years' experience
- ® Project life-cycle methodology
- ® Project management tools (Project)
- ® Configuration management tools (PVCS, SCCS)
- ® Testing tools
- ® CASE design tools (Rose, ERwin)

Possible Job Titles: Telecommunications Analyst, Senior Database Analyst, Information Engineer, Customer Support Specialist.

Minimum Education: A Bachelor's degree in computer science, engineering, mathematics, or related field, with 2 years practical experience.

GSA Labor Rate: \$88.68

Commercial Job Title: Network Engineer Level 1

Minimum/General Experience: Four years' experience with at least one-year of full-time experience directly related in the implementation and maintenance of local and wide area network application systems; or completion of a job training program in networks or data communications certified by Novell, Microsoft.

Functional Responsibility: Positions in this class require specialized subject matter expertise in the operation of network systems including LANs and WANs. A Senior Network Engineer and/or Network Manager provide general direction. Responsibilities do not include direct supervision of other positions but may serve as lead workers. Positions in this class are distinguished from the Senior Network Engineer class in that the Senior: has a broader scope of analytical tasks; designs and implements network systems; has a greater responsibility for presentation and support of recommendations to decision-making levels; makes recommendations which have significant impact or consequences including the development of new policies, procedures and service; and may supervise administrative, professional or technical personnel.

Examples of Duties: Identifies, isolates, trouble-shoots and resolves operational problems related to local and wide area network systems (LAN/WAN); tests hardware and transmission media including micro-computers, hubs, network adapter cards, network software, cables and connectors; communicates with users regarding network failures and malfunctions; determines whether problems are due to hardware, software, cabling system, or operator error; operates a variety of diagnostic and test equipment as well as micro-computers, hubs, patch panels and cables involved in network access; provides technical expertise to personnel, administrators, and users concerning LAN/WAN concepts, operations and problems including a variety of platforms such as Novell, and Windows NT; communicates with internal staff regarding equipment, circuit failures, parts and network operations; researches and analyzes problems and equipment as assigned; responds to Help Desk tickets and some trouble tickets; installs and replaces network equipment and software at various user locations; utilizes portable test equipment to identify and resolve problems on-site; maintains records related to network installation and trouble calls; confers with users regarding basic and prospective needs for network requirements and services; assists other technical support staff and engineers to assure optimum system availability to users; follows department standards to ensure network system security; monitors systems to support and control network traffic; follows back-up, restart and recovery procedures for network applications including the proper rotation and labeling of tapes; learns and understands new LAN and WAN concepts, protocols; reads literature, attends classes, confers with colleagues to maintain and develop knowledge of industry trends, innovations, new designs; assists in evaluating and recommending network methods, upgrades, components and applications; evaluates security needs in order to establish system configurations; may consult with technical and managerial personnel to recommend solutions to identified problems affecting network applications and systems; assists in conducting on-site surveys to analyze and recommend network plans; assists in designing and developing network systems; assists in the preparation of technical specifications to be used in requests for proposals or quotations; assists in the development of procedures manuals, updating operational procedures and notification/training of users relevant to LANs/WANs; assists in evaluating new applications to determine their effect on existing applications and systems; trains clerical, technical and professional employees on systems and operations, reviews their work and provides input on evaluations and competency; evaluates and recommends viable system alternatives, products, and services to existing network configurations; performs other related duties as assigned.

Riley Technology Solutions

IT – 70 Schedule Contract No. GS35F0080V

Possible Job Title: Communications Engineer, LAN Engineer, and Training Specialist **Minimum Education:** A Bachelor's degree in computer science, engineering, mathematics, or related field, with 1 year experience.

GSA Labor Rate: \$72.56

Commercial Job Title: Network Engineer Level 2

Minimum/General Experience: Six years' experience with at least two-year of full-time experience directly related in the implementation and maintenance of local and wide area network application systems; or completion of a job training program in networks or data communications certified by Novell, Microsoft.

Functional Responsibility: Positions in this class require specialized subject matter expertise in the operation of network systems including LANs and WANs. A Senior Network Engineer and/or Network Manager provide general direction. Responsibilities do not include direct supervision of other positions but may serve as lead workers. Positions in this class are distinguished from the Senior Network Engineer class in that the Senior: has a broader scope of analytical tasks; designs and implements network systems; has a greater responsibility for presentation and support of recommendations to decision-making levels; makes recommendations which have significant impact or consequences including the development of new policies, procedures and service; and may supervise administrative, professional or technical personnel.

Examples of Duties: Identifies, isolates, trouble-shoots and resolves operational problems related to local and wide area network systems (LAN/WAN); tests hardware and transmission media including micro-computers, hubs, network adapter cards, network software, cables and connectors; communicates with users regarding network failures and malfunctions; determines whether problems are due to hardware, software, cabling system, or operator error; operates a variety of diagnostic and test equipment as well as micro-computers, hubs, patch panels and cables involved in network access; provides technical expertise to personnel, administrators, and users concerning LAN/WAN concepts, operations and problems including a variety of platforms such as Novell, and Windows NT; communicates with internal staff regarding equipment, circuit failures, parts and network operations; researches and analyzes problems and equipment as assigned; responds to Help Desk tickets and some trouble tickets; installs and replaces network equipment and software at various user locations; utilizes portable test equipment to identify and resolve problems on-site; maintains records related to network installation and trouble calls; confers with users regarding basic and prospective needs for network requirements and services; assists other technical support staff and engineers to assure optimum system availability to users; follows department standards to ensure network system security; monitors systems to support and control network traffic; follows back-up, restart and recovery procedures for network applications including the proper rotation and labeling of tapes; learns and understands new LAN and WAN concepts, protocols; reads literature, attends classes, confers with colleagues to maintain and develop knowledge of industry trends, innovations, new designs; assists in evaluating and recommending network methods, upgrades, components and

applications; evaluates security needs in order to establish system configurations; may consult with technical and managerial personnel to recommend solutions to identified problems affecting network applications and systems; assists in conducting on-site surveys to analyze and recommend network plans; assists in designing and developing network systems; assists in the preparation of technical specifications to be used in requests for proposals or quotations; assists in the development of procedures manuals, updating operational procedures and notification/training of users relevant to LANs/WANs; assists in evaluating new applications to determine their effect on existing applications and systems; trains clerical, technical and professional employees on systems and operations, reviews their work and provides input on evaluations and competency; evaluates and recommends viable system alternatives, products, and services to existing network configurations; performs other related duties as assigned.

Possible Job Title: Communications Engineer, LAN Engineer, and Training Specialist **Minimum Education:** A Bachelor's degree in computer science, engineering, mathematics, or related field, with 2 years' experience. **GSA Labor Rate: \$76.59**

Commercial Job Title: Network Engineer Level 3

Minimum/General Experience: Eight years' experience with at least three years of full time experience in the design, development, integration, implementation and /or maintenance of multi-protocol local and/ or wide area networks, and telecommunications system. Function as technical consultant to the business units

Functional Responsibility: Management level personnel provide general direction. Responsibilities include functional or technical supervision of lower level professional, technical or clerical positions. Positions in this class are distinguished from other related classes in that they require specialized subject matter expertise in the design/operation of network systems including LANs and WANs; knowledge is applied to research and evaluation involving innovative solutions and alternatives. Positions in this class are distinguished from those in the Network Engineer II class by: the advance level of technical expertise, experience and ability to evaluate solutions for networking requirements; making recommendations which have significant impact or consequences including the development of new policies, procedures and service.

Examples of Duties: Identifies, isolates, trouble-shoots and resolves operational problems related to local and wide area network systems (LAN/WAN); tests hardware and transmission media; communicates with users regarding network failures and malfunctions; determines whether problems are due to hardware, software, cabling system, or operator error; operates a variety of diagnostic and test equipment; provides technical expertise to personnel, administrators, and users concerning LAN/WAN concepts, operations and problems including a variety of platforms; communicates with internal staff regarding equipment, circuit failures, parts and network operations; researches and analyzes problems and equipment; answers calls for installations of printers, software; responds to Help Desk tickets and call

Riley Technology Solutions

IT – 70 Schedule Contract No. GS35F0080V

tickets; utilizes portable test equipment to identify and resolve problems on-site; maintains records related to network installation and trouble calls; confers with users regarding basic and prospective needs for network requirements and services; assists other technical support staff and engineers to assure optimum system availability; follows department established standards to ensure network system security; monitors systems to support and control network traffic; follows back-up, restart and recovery procedures for network applications; reads literature, attends classes, confers with colleagues, etc. to maintain and develop knowledge of industry trends, innovations, new designs; evaluates security needs in order to establish system configurations and operating procedures; evaluates and recommends network methods, upgrades, components and applications for a wide variety of systems to achieve optimal efficiency; consults with technical and managerial personnel to recommend solutions to identified problems affecting network applications and systems; conducts on-site surveys to analyze and recommend network plans; formulates operational designs of a creative and innovative nature for the development and maintenance of LANs and WANs including connections to a large mainframes; prepares technical specifications to be used in requests for proposals or quotations for hardware and software applications; develops procedures manuals, updating operational procedures and notification/training of users relevant to LANs/WANs; evaluates and recommends viable system alternatives, products, and services to existing network configurations; trains employees on systems and procedures, sets priorities, reviews their work and provides input on evaluations; resolves difficult or complex network problems through on-site analysis at different locations, , and also through the vendors; devises and implements strategies for connection of independent networks.

Possible Job Titles: Principal Engineer, Senior Communications Engineer, Senior LAN Engineer, Senior Computer Specialist, and Senior Training Specialist.

Minimum Education: An advanced degree preferred or a Bachelor's degree in computer science, engineering, mathematics, or related field, with 3 years practical experience.

GSA Labor Rate: \$88.68

Commercial Job Title: Network Engineer Level 4

Minimum/General Experience: Eight years' experience with at least four years of full time experience in the design, development, integration, implementation and /or maintenance of multi-protocol local and/ or wide area networks, and telecommunications system. Function as technical consultant to the business units.

Functional Responsibility: Positions in this class are distinguished from Network Engineer Level IV in that they require specialized subject matter expertise in the design, setup and configuration of catalysts, switches and routers; knowledge is applied to research and evaluation involving innovative solutions and alternatives. Positions in this class are distinguished from those in the Network Engineer Level III class by the advance level of technical expertise in providing advanced support and maintenance for enterprise wide Network.

Riley Technology Solutions

IT – 70 Schedule Contract No. GS35F0080V

Examples of Duties: Provide enterprise deployment by setting up and supporting cluster servers for high availability server systems. Implement web server farm through Windows Load Balancing Systems (WLBS). Develop and maintain enterprise systems management and disaster recovery procedures by establishing system configurations and operating procedures for Compaq Insight Manager, Cisco Works 2000 and Microsoft System Management Server (SMS). Provide enterprise Backup System through Arcserve and enterprise virus protection with Netshield and Virusscan. Evaluate and recommend viable system alternatives, products, and services to existing network configurations; resolve difficult or complex network problems through on-site analysis at different locations, and also through the vendors; devise and implement strategies for connection of independent networks.

Possible Job Titles: Principal Engineer, Senior Communications Engineer, Senior LAN Engineer, Senior Computer Specialist, Senior Training Specialist.

Minimum Education: An advanced degree preferred or a Bachelor's degree in computer science, engineering, mathematics, or related field, with 4 years practical experience.

GSA Labor Rate: \$100.78

Commercial Job Title: Network Engineer Level 5

Minimum/General Experience: Nine years' experience with at least five years of full time experience in the design, development, integration, implementation and /or maintenance of multi-protocol local and/ or wide area networks, and telecommunications system. Function as technical consultant to the business units.

Functional Responsibility: Positions in this class are distinguished from Network Engineer Level IV in that they require specialized subject matter expertise in the design, setup and configuration of catalysts, switches and routers; knowledge is applied to research and evaluation involving innovative solutions and alternatives. Positions in this class are distinguished from those in the Network Engineer Level IV class by the advance level of technical expertise in providing campus type network system design.

Examples of Duties: Design, setup, operate and maintain catalyst, switches and routers in an enterprise wide network. Provide enterprise deployment by setting up and supporting cluster servers for high availability server systems. Implement web server farm through Windows Load Balancing Systems (WLBS). Develop and maintain enterprise systems management and disaster recovery procedures by establishing system configurations and operating procedures for Compaq Insight Manager, Cisco Works 2000 and Microsoft System Management Server (SMS). Provide enterprise Backup System through Arcserve and enterprise virus protection with Netshield and Virusscan. Identify, isolate, trouble-shoots and resolve operational problems related to local and wide area network systems (LAN/WAN). Develop procedure

Riley Technology Solutions

IT – 70 Schedule Contract No. GS35F0080V

manuals, updating operational procedures and notification/training of users relevant to LANs/WANs; evaluate and recommend viable system alternatives, products, and services to existing network configurations; resolve difficult or complex network problems through on-site analysis at different locations, and also through the vendors; devise and implement strategies for connection of independent networks.

Possible Job Titles: Principal Engineer, Senior Communications Engineer, Senior LAN Engineer, Senior Computer Specialist, Senior Training Specialist.

Minimum Education: An advanced degree preferred or a Bachelor's degree in computer science, engineering, mathematics, or related field, with 5 years practical experience.

GSA Labor Rate: \$108.84

Commercial Job Title: Service Engineer

Minimum Responsibility: Perform hardware installations and repairs on customer equipment working primarily on customer site. Determines site and equipment requirements; outlines interdependencies. Understands customer environment and how the solution fits their needs; identifies consequences of various solutions. Communicates clearly with customer concerning expectations of delivery and customer responsibilities.

Functional Responsibility: Interacts with client technical, administrative, or management, direct technical specialists and others as appropriate for task at hand. Develops and implements installation plan to meet customer's expectations and time lines. Configures systems hardware, software and network components to a minimum operating system to demonstrate interoperability or hardware components and verification of system operation. Uses proactive process and tools to identify and work future service maintenance needs.

Example of Duties: Seamless knowledge transfer of installation, support, and break/fix activities. Conducts customer presentations; organizes and presents information to convey major points clearly and persuasively. Maintain a high level of customer satisfaction by clarifying customer needs and ensuring that they are met. Handles customer-relations problems promptly and appropriately, escalates issues according to established procedures. Completes installation, support, and break/fix related documents accurately and in a timely manner.

Possible Job Titles: Senior Engineer, Customer Engineer, Field Engineer, Technical Field Engineer, Service Repair Engineer and System Installation Engineer.

Minimum Education: Bachelor degree plus (e.g. but not required) additional broad specialized training with electronic mechanical devices. Three to five years practical field experience.

GSA Labor Rate: \$100.78

Commercial Job Title: System Administrator

Minimum/General Experience: Four or more years of directly related experience involving system service applications and functions, in a large multi-faceted system domain.

Functional Responsibility: Requires specialized subject matter expertise in one or more computer systems utilized for business applications; interface between system software and other systems used; spreadsheet, database and word processing applications; hardware operating systems, computer hardware, mainframe access basics, and networks. Knowledge is applied to system administration and support activities. The Systems Administrator is distinguished from the Principal Systems Analyst class which performs duties independently and requires a greater degree of knowledge and experience, and the Principal Systems Specialist which receives closer supervision and has less responsibility for system administration.

Example of Duties: Maintains system availability to users through daily monitoring; provides technical, functional and operational support to users in the implementation and use of software applications; provide application guidance, parameters and specifications to consultants in developing customized reports necessary to meet business needs including identifying data sources and structures; develops and provides set-up specifications and parameters in the development of interfaces and other automated processes; develops specifications for system modifications, corrections and testing of these system changes prior to implementation; coordinates the installation of new modules, tools, etc.; provides training to new users as well as follow-up training and assistance; confers with users regarding current and prospective system changes and future needs; plans, organizes, controls, and maintains the scheduling of reports, interfaces, project logs and records, problem logs, and progress of projects in relations to established time schedules and work outlines; attends and conducts system planning, status, and functional meetings; writes SQL programs to extract data for ad hoc and scheduled reports; serves as technical liaison with outside consultants and technical support staff performs system and database administration including backup and restore procedures; analyzes and corrects database growth and performance issues; works with NOS to complete required tasks for maintaining related computer hardware and software; provides security administration in adding and removing users, resolving access problems and determining level of system access; performs related duties as assigned.

Possible Job Title: Quality Assurance Specialist, Test Specialist, Computer Specialist, LAN Specialist, and Administrative Specialist.

Minimum Education: A Bachelor's degree with major coursework in microcomputer software applications and/or computer science, business administration or a closely related field.

GSA Labor Rate: \$64.50

Commercial Job Title: Help – Desk Administrator

Minimum/General Experience: Three years of progressive experience in providing help-desk support and administration with at least two years' experience in supporting and troubleshooting COTS software, Operating Systems and hardware malfunction.

Functional Responsibility: Under the supervision of a Task Manager or Project Manager provide help desk activity for purposes of resolving end-users hardware and software problem through telephone assistance for installation and configuration of personal computer hardware and peripherals, network client software and application software.

Example of Duties: Log trouble call and resolution into the helpdesk database (including problem and solution). Unresolved calls should be escalated to onsite technicians for resolution. Trouble call will be closed out when resolution is recorded. Track all incoming calls, scheduling appointments, ensuring call follow-up and maintain the Help-Desk data base tracking system. Provide technical assistance to end-users aimed at helping them develop their own applications using COTS software such as Excel, Word, Lotus Notes, Access, PowerPoint, etc. Provide assistance on the selection of appropriate hardware/software before the initiation of a project. Coordinate all applications development efforts with the assigned personnel, identify, analyze, and effect resolution in properly identifying and isolating the source of hardware and software problems. Provide end-users with practical, how-to advice, primarily focused on product functionality, configuration and documented features. Track problems in database to determine software and hardware " lemons' or common problems that must be addressed on a higher level. Assist in identifying peripheral hardware supplies in support of information processing activities, such as toner cartridges and ink cartridges; but not including parts covered under other maintenance contracts. Maintain maintenance records on equipment. Contract warranty and maintenance agreement vendors for remedial and emergency repairs when hardware malfunctions occur. Develop operations, administrative, and quality assurance back up plans, as well as procedural documentation. Recognizing and taking appropriate action(s) with regard to equipment and/or software problems and notifying appropriate personnel of systems degradations. Complete incident reports for all critical or unusual occurrences, (i.e., workstation or server failures). Provide beginning-to-end problem management for critical or difficult-to-resolve problems; coordinate with other responsible personnel to ensure problem resolution. Develop and maintain the ability to address simple business line application issues, as well as direct more complex problems, perform other duties as assigned.

Possible Job Titles: Application Specialist, Customer Support Specialist, Junior LAN/WAN Specialist.

Minimum Education: Minimum High-School Diploma, or Microsoft Certified Product Specialist (MCP) Certification.

Riley Technology Solutions

IT – 70 Schedule Contract No. GS35F0080V

GSA Labor Rate: \$60.46

Commercial Job Title: Multimedia Specialist Level 1

Minimum/General Experience: Four years of directly related experience in the design, development and implementation of systems software and/or business application systems for computer system using advanced programming languages.

Functional Responsibility: Requires specialized subject matter expertise in video and audio techniques, multimedia file formats, as well as in streaming technologies and protocols; possesses a background in movie/video making, sound recording, storyboarding and site mock-up, operating systems and related system software for computers in a large multi-user environment; The characteristics, capabilities, and uses of operating system components and related vendor supplies and software packages; Software systems including coding and assembly level, procedural and non-procedural, and job control languages; Operating systems and database systems, and teleprocessing systems; As well as extensive directly related and progressive experience; Knowledge is applied to research and evaluation significant impact or consequence involving highly specialized and technical areas impacting recommendations and development of new policies, procedures and services.

Example of Duties: Duties may include, but are not limited to the following: Design, code, implement, maintain, and evaluate computer operating software; Analyze existing hardware products and related commercial software packages to determine the feasibility of using existing products in place of developing new software in-house; Prepare technical specifications to be used in requests for proposals or quotations; Evaluate the impact of new applicants to determine their impact on existing operations and system software and system performance; Consult with technical and managerial personnel, and recommend solutions to identify problems affecting operating systems performance; Recommend technical standards and policies; Perform operating system generations; Analyze and coordinate with vendors for new versions of operating systems; Develop and implement procedures for back-up, restart, and recovery of all software components and major files; Coordinate with technical personnel of vendors for troubleshooting, maintaining, and implementing new software and hardware components to operating systems; Analyze computer performance statistics and make changes to the appropriate software components to attain maximum system performance; Coordinate with and assist staff members in implementing, maintaining, and troubleshooting teleprocessing, database, and other system software; Prepare and conduct training sessions for operations and programming personnel regarding programming and operation techniques and software concepts; Coordinate with application systems and programming personnel, and assist and advise them in the diagnosis and correction of software and hardware problems associated with application programs; May develop, program, and implement data center support systems; perform related duties as assigned.

Possible Job Titles: Web Developer, Graphic Designer, Multimedia Designer, Webmaster, Document Imaging/Management programmer, Database Administrator, Help-Desk Manager, Senior Test Specialist, LAN/WAN Specialist, Documentation Specialist and Scriptor.

Minimum Education: A Bachelor's degree with major coursework in computer science, engineering, mathematics, with 1-year practical experience.

GSA Labor Rate: \$88.68

Commercial Job Title: Technical Writer

Minimum/General Experience: Assists in collecting and organizing information required for preparation of user's manuals, training materials, installation guides, proposals, reports, and other systems/applications documentations.

Functional Responsibilities: Develop, write, edits functional descriptions, system specifications, user's manuals, special reports, or any other customer deliverables and documents.

Example of Duties: Writes, in clear and concise language, such technical documents as procedure manuals, service manuals, and related technical publications concerned with installation, operation, and maintenance of information technology systems and other related network, software and hardware equipment. Includes writing such technical documentation as operational specifications, bulletins, articles, service manuals, and marketing publications. Acquires or verifies knowledge of subject by interviewing workers engaged in developing new products and services or in making improvements, observing performance of experiments and methods of production, referring to specification and design proto-types, engineering drawings and notes, trade and engineering journals, rewrites of articles, bulletins, manuals, or similar publications.

Possible Job Titles: Technical Documentation Specialist.

Minimum Education: An advanced degree preferred or a Bachelor's degree in computer science, engineering, mathematics, or related field, with 5 years practical experience.

GSA Labor Rate: \$100.78

Commercial Job Title: Altris OEM Professional

Minimum/General Experience: At least 2 years of enterprise process management experience.

Functional Responsibilities: Provides specialized knowledge relating to implementing Altris Software Tools sets in an enterprise environment. This may include review of enterprise architectures, design of enterprise approach, best practice implementations for enterprise management using the Altris tool sets. Demonstrates ability to analyze complex problems, research and synthesize data, and propose unique solutions or alternatives. May serve as prime point of contact for clients and in-house technical advisor.
