### **SPECIAL NOTICE TO AGENCIES: Small Business Participation**

SBA strongly supports the participation of small business concerns in the Federal Supply Schedules Program. To enhance Small Business Participation SBA policy allows agencies to include in their procurement base and goals, the dollar value of orders expected to be placed against the Federal Supply Schedules, and to report accomplishments against these goals.

For orders exceeding the micro-purchase threshold, FAR 8.404 requires agencies to consider the catalogs/pricelists of at least three schedule contractors or consider reasonably available information by using the GSA Advantage! on-line shopping service ([www.fss.gsa.gov](http://www.fss.gsa.gov)). The catalogs/pricelists, GSA Advantage! and the Federal Supply Service Home Page ([www.fss.gsa.gov](http://www.fss.gsa.gov)) contain information on a broad array of products and services offered by small business concerns.

This information should be used as a tool to assist ordering activities in meeting or exceeding established small business goals. It should also be used as a tool to assist in including small, small disadvantaged, and women-owned small businesses among those considered when selecting pricelists for a best value determination.

For orders exceeding the micro-purchase threshold, customers are to give preference to small business concerns when two or more items at the same delivered price will satisfy their requirement.

### Product Descriptions

#### PSSC Labs PowerWulf Beowulf Clusters

**PowerWulf Beowulf Clusters** are scalable performance clusters based on commodity hardware, on a private system network, with open source software (Linux) infrastructure. Typical PowerWulf installations are composed of a single head node computer and one or more slave node PowerWulf computers. Performance can be improved proportionally with added PowerWulf computers. The cluster can be any of a number of PowerWulf compute nodes as simple as two networked computers each running Linux and sharing a file system or as complex as 1024 PowerWulf nodes with a high-speed, low-latency network. All PSSC Labs clusters include CBeST, the Complete Beowulf Software Toolkit.

**PSSC Labs integrates and tests each cluster as a complete system including all software.**

#### PowerWulf Cluster

Consists of a single head node and one or more slave nodes, Linux OS and CBeST software.

#### PowerWulf

Consists of a single slave node.

#### PowerServer

Consists of a single head node.

#### PowerRAID

Consists of a single RAID unit the is integrated with the PowerWulf Cluster.
