**Crunchy Data Architect**

**Functional Responsibility:** The Data Architect is responsible for working with customers to gather requirements for deployment, advise the client on alternative hardware/software configurations and to deploy data management solutions incorporating both relational database technology and cloud enabled open source software solutions into these environments. In addition, the Data Architect is responsible for overseeing the work of Senior Data Engineering Consultant, Data Engineering Consultant, Associate Data Engineering Consultant, Senior Open Source Data Engineering Specialists and Open Source Data Engineering Specialists. The Data Architect could be responsible for small to large size deployments in both the customization and deployment roles.

**Minimum Experience:** Twelve (12) years of technical experience in software engineering and/or systems engineering. Requires expertise in all phases of designing, enabling and maintaining data management architectures. In addition requires extensive experience in developing custom client solutions based on customer use cases and workflows. Knowledge of the data management ecosystem including available hardware, relational database management systems, cloud enabled data management technologies, open source data management software, and structure and management practices is required.

**Minimum Education:** Bachelor’s Degree in Computer Science

---

**Crunchy Senior Database Engineering Consultant**

**Functional Responsibility:** The Senior Data Engineering Consultant will work with customers on requirements definition, system deployment and can support data management solutions incorporating both relational database technology and/or cloud enabled open source software solutions into these environments in collaboration with other services organizations and the customer’s internal engineering staff. A Senior Data Engineering Consultant could play a key role in the deployment and support of data management solutions.

**Minimum Experience:** Ten (10) years of technical experience technical experience in software engineering and/or systems engineering. Requires experience with designing, enabling and maintaining data management architectures. In addition requires competence in developing custom client solutions based on customer use cases and workflows. Senior Database Engineering Consultants have knowledge of the data management ecosystem including various relational database management systems, cloud enabled data management technologies and open source data management software.

**Minimum Education:** Bachelor’s Degree in Computer Science
