

Ride Designs Custom Cushion

The Ride Custom Cushion (includes cushion base, CAM straps, cover, and 2 Gauges) – virtually any width to 22"W and virtually any depth to 22"D.

The Ride Custom Cushion uses a unique shape capturing process by means of the Ride Simulator which takes an imprint of the person's sitting surface while in their wheelchair. The Custom Cushion is then created from that shape using Orthotic and Prosthetic principles of off-loading pressure and shear forces at the at-risk bony prominences and transferring the forces to tolerant tissue. The Ride Custom Cushion is fabricated with Brock™, a composite foam technology that is lightweight and breathable which transports heat and moisture away from the sitter's surface. The Practitioner ordering the Ride Custom Cushion must undergo training by the manufacturer and be certified in the provision of this product. When ordering, please contact Ride Designs for an individual price quote for each Ride Custom Cushion.
