### PMI HALO SEAL

In the heat of battle, PMI's Halo Seal can make the difference in saving lives. When time is critical, the Halo Seal is the essential choice for managing penetrating chest trauma. It's ideal for the treatment of open pneumothorax and also prevent the development of a tension pneumothorax resulting from gunshots, stab wounds or other chest injuries. The Halo Seal is specifically designed for casualties with excessive bleeding, heavy perspiration, or very wet and extreme environments. The unique design offers a large pull tab that allows for easy, quick application. A highly aggressive hydrogel enables the Halo Seal to conform and adhere to all contours of a patient's body. It also prevents further contamination of the injury.

#### FEATURES AND BENEFITS:

- Superior adhesion providing total occlusion even with excessive blood or heavy perspiration.
- Easy release film and large pull tab for effortless removal.
- Can be used to hold other dressings in place.
- Durable protective backing.
- Designed and tested to perform under extreme conditions with temperature ranges from below 32°F to over 140°F.
- Less expensive than other chest seals.
- 2 Seals per package to provide coverage for both penetration and exit wounds.

A-4A	G1163	PMI Halo Seal, 2/Pack	Each	\$11.06

2 SEALS PER PACK!

### EMERGENCY PNEUMOTHORAX SET

Supplied sterile in peel-open packages. Intended for one-time use. Catheter introduction is performed using a one-stick trocar technique. Catheter placement is facilitated by its Intro-Tip™ design which helps prevent the catheter from accordioning back over the trocar needle assembly when encountering resistance during insertion. AQ® hydrophilic coating, when activated, becomes very lubricious greatly reducing the coefficient of friction. The decreased friction of the distal catheter surface facilitates ease of catheter introduction reducing placement trauma.
